

Hack4Justice 2026: Developer Brief – Challenge A

Theme: Regulatory AI & Fiscal Compliance

1. The Core Problem

Tunisian MSMEs struggle with complex, constantly changing legal and tax regulations. Simple administrative tasks, such as updating company records, determining tax obligations, or obtaining legal clearances, require excessive time, money, and physical visits to administrative offices. On the other side, public agencies (such as RNE, DGI, and APII) are overwhelmed by manual paperwork, physical queue management, and data-entry errors.

2. Choose Your Angle (Pain Points Explained)

Select one or more of these common administrative pain points, or target a validated equivalent:

- **Tax & Fiscal Compliance (DGI / Impôts):** Calculating tax obligations, preparing quarterly declarations, or requesting a tax clearance certificate (*Quittance Fiscale*) requires navigating ambiguous tax codes and submitting paper forms.
- **Corporate Registry & Status Updates (RNE):** Modifying company details, submitting annual financial statements, or changing legal representatives requires specialized legal knowledge and manual filing at registry desks.
- **Licensing & Administrative Approvals (APII / BCT / Ministries):** Securing sector-specific operating permits, foreign exchange authorizations, or export clearances involves complex multi-agency procedures with little visibility into status.

3. The Challenge

Build an AI-powered B2G (Business-to-Government) or B2B SaaS platform that translates complex legal and fiscal requirements into simple, actionable digital workflows for MSMEs, while providing public administrations with a streamlined digital verification portal.

4. Must-Have Technical Outputs & Safeguards

- **The MSME Interface:** A user-friendly dashboard or conversational AI system (utilizing GenAI/AWS Bedrock) that guides business owners through a specific compliance or filing workflow. Integrating OCR (e.g., AWS Textract) to extract data from scanned receipts, *patentes*, or ID documents is highly encouraged.
- **Mandatory Institutional Module:** Every prototype **must** include an **Institutional Admin Dashboard** or a **Public API Hook**. You must build the backend view that a public officer (at DGI, RNE, or APII) would use to digitally review, audit, approve, or flag the MSME's submitted data in real time.

5. Mandatory Pitch Requirement

During your 3-minute pitch at the VIP Showcase, you **must dedicate 45 seconds and 1 explicit slide** (titled "*The Agency Benefit*") to answering this statement:

"If [RNE / DGI / APII] connects to our tool, here is exactly how many manual hours, paper processes, or queue delays their agents will save per month."

*Note: The best-designed institutional workflow is eligible for the dedicated **Institutional Adoption Prize**.*

6. Glossary of Key Terms

- **Patente:** Tax identification certificate (*Carte d'Identification Fiscale*).
- **Quittance Fiscale:** Official tax clearance certificate proving compliance.
- **Extrait RNE:** Official business registry extract proving legal existence.
- **DGI:** *Direction Générale des Impôts* (Tax Authority).
- **APII:** *Agence de Promotion de l'Industrie et de l'Innovation*.
- **BCT:** *Banque Centrale de Tunisie*.
